Module 6: Containerization With Docker

Case study

edureka!

edureka!

Problem Statement

You are appointed as a senior DevOps Engineer with a good package in a company named D&K Private Limited. You have been assigned your first set of tasks.

- Use the installation guide provided in the LMS, to set up your system for performing the Docker practical. Install docker-ce on your machine
- Execute a container named C1 containing the image of centos in interactive, terminal and detached mode. Create a file inside the container and copy the file to the host

You have to make your first impression as an efficient and punctual employee by doing the above task within the given time frame.

Note: In a word document, take screenshot of the output of above task in Docker and submit it.
